

Create **WEB APPLICATIONS USING AWS SERVICES**

SYAHMI.S & HASYIR.M

The INTRODUCTION

We are making website applications using Amazon Web Service (AWS) services which covering Storage, Networking, Computing and Database.

Why AWS?

SCALABILITY

RELIABILITY

FREE TIER ACCESS

COMPREHENSIVE SERVICES

INDUSTRY RELEVANCE

Content Timeline

Act like a digital warehouse to stores data, files or backups online using Amazon S3 (Simple Storage Service)

STEP-BY-STEP

1. Create Bucket
2. Enable Static Website Hosting
3. Upload Files
4. Make Public using ACL
5. Website Testing

Act like a “roads” and “fences” that connects application securely to the internet or other AWS services using VPC (Virtual Private Cloud) service.

STEP-BY-STEP

1. Create VPC
2. Set IPv4 CIDR Block
3. Add 2 public and 2 private subnets
4. Set each subnets their CIDR Block
5. Create Security Group
6. Choose our VPC
7. Set Inbound Rules to enable SSH, HTTP and HTTPS.

Act like an “engine” to provide process power to run application such as executing codes and serves web pages using EC2 (Elastic Compute Cloud) service.

STEP-BY-STEP

1. Create/Launch Instances
2. Choose Amazon Machine Image (AMI)
3. Set Instance Type
4. Create new key pair
5. Choose our VPC
6. Choose any public subnets
7. Choose our Security Group
8. Set Elastic IP (Optional)

Act like a “library catalogue” that organizes and manages structured data for applications using Amazon RDS (Relational Database Service)

STEP-BY-STEP

1. Create Database → full configuration.
2. Choose Engine Type.
3. In Credentials management, select self manage.
4. Set Master Password.
5. Set Instance Type.
6. Connect to our EC2 Instance.
7. Choose our VPC.
8. Choose our Security Group.

How to **CONNECT**

STEP-BY-STEP

1. Launch EC2 Instance
2. Open local machine's terminal
3. SSH into the instance
4. Install apache
5. Install MySQL client
6. Access database RDS
7. Upload MySQL code
8. Website Testing

The **SUMMARY**

To summarize, our project demonstrates on how to use AWS Services from Storage, Networking, Computing and Database and how these services work together to power a modern web application.
